Miller A. B. & Smith C. D. (2005) Full title of manuscript. – Sydowia XX (X): pp-pp. (The number of issue and numbers of pages will be inserted by the publisher)

This is the “abstract” part. The object of the study, employed methods, results, and primary conclusions are summarized in one concise paragraph.

Keywords: anamorphic fungi, *Trichoderma*, Ascomycota, taxonomy, molecular phylogeny.

This is the introduction part. Use Times New Roman and double-space for the entire manuscript. No heading. Paragraphs are set off from the rest of the text by vertical spacing as done here. See the second paragraph below. Please avoid, as far as possible, the use of any special characters or symbols (e.g. Greek letters). Do not start sentences with numbers, symbols or abbreviated words (e.g. abbreviated taxon names). Spell out numbers under 10. Please follow all instructions in this template-like text as far as possible. Authors should be cited chronologically (Name 1948, Name 1966, Name 2004, Name & Name 2004, Name *et al.* 2005).

This is the second paragraph of the introduction. Use proper mycological terms constantly throughout the manuscript avoiding botanical terms (e.g. use ‘fungi’ or ‘mycobiota’ instead of ‘mycoflora’, ‘saprobic’ instead of ‘saprophytic’, ‘basidioma’/‘ascoma’ instead of ‘basidiocarp’/‘ascocarp’, ‘carpophore’ or ‘sporophore’). Please, refer to a recent issue of *Sydowia*!

¹Use 10 pt also for foot-notes if they are unavoidable or for e-mail addresses (e.g. ¹e-mail: aaa@bb.ac.at).

4 Sampling

5 Text
6 text
7 text text text text text text text text text text.

8 Isolation and identification

9 Text text text text – 2.12 mL - μ L - 30 % (wt/wt) – (wt/vol) (weight/volume)- 25 °C
10 – s – min - h - d (seconds, minutes, hours, days) – correlation ($r = 0.99$; $P < 0.01$) – numbers
11 30 200.50 (= thirty thousand two hundred point five; without comma) - (see SI unit rules and
12 style conventions: <http://physics.nist.gov/cuu/Units/checklist.html>). text text text text text
13 text text text text text text text text text.

14 Spore measurements

15 Spores from gill fragments of dried basidiomata (please, state origin) were measured in
16 2.5 % KOH (state type of mounting medium) using a (Name) microscope (Nomarski
17 interference contrast; oil immersion objective 100 x). Measurements are given as follows:
18 (minimum) mean \pm standard deviation (maximum), $Q = \text{length}/\text{width ratio}$ ($n = \text{sample size}$;
19 statistically sufficient number of mature spores – usually more than 30 – should be measured.

20 Example: Spores (10.5) 11.8 \pm 0.7 (13.4) x (5.5) 6.2 \pm 0.3 (6.7) μ m, $Q = (1.7)$ 1.9 \pm 0.1
21 (2.1) ($n = 31$). Alternative notation: (10.5) 11.1-12.5 (13.4) x (5.5) 5.9-6.5 (6.7) μ m ($n = 31$).

22 For microscopic characters, numerical data should be rounded to one decimal place. For
23 colour notations, the use of colour codes is strongly suggested (e.g. Methuen Handbook of
24 Colours; Kornerup & Wanscher 1978).

25

26 Results (and Discussion) or Taxonomy

16
17 Description - a s c o m a t a (for distinct types of ‘fruiting bodies’ use the terms
18 ‘perithecia’, ‘cleistothecia’, and so on; for basidiomycetes use
19 ‘basidiomata’). Refer to figures (e.g. Fig. 1 or Figs. 1 - 3) in the text. The technical
20 terms for important characters are s p a c e d . Continue your description in the following
21 form. – A s c i text text text. – P a r a p h y s e s text text text. – A s c o s p o r e s (10.5)
22 11.1-12.5 (13.4) x (5.5) 5.9-6.5 (6.7) µm (n = 31). Do not use bold type except for taxon
23 names and additional information like ‘sp. nov.’ in the heading of the description as
24 demonstrated above.
25 Use paragraphs like this one for structuring your description. In the following you see
26 format examples for additional information that usually follows descriptions.

1 **Tab. 1.** – *Hygrophorus lucorum*. Spore size and spore shape according to different authors
 2 and collections. (av = average; n.d. = no data; SAV = S. Adamčík.)

3

Reference^a	Size (µm)^b	Quotient	Shape
Arnolds (1990)	6.5-9.0 × 4.0-5.5	(1.6) 1.7-1.9 (2)	oblong, rarely ellipsoid
Bon (1992)	8.0-9.0 × 5.0-6.0	n.d.	ellipsoid or inverted ovoid
Breitenbach & Kränzlin (1991)	6.8-9.5 × 4.5-5.3	1.4-1.9	ellipsoid
Candusso (1997)	7.2-9.0 × 5.0-6.0	1.4-1.5	ellipsoid, ovoid, plum-shaped
Epitype (SAV)	7.0-8.2 × 4.5-5.1 (av 7.6 × 4.8)	1.5-1.7 (av 1.6)	mostly ovoid, rarely oblong
Oľšé (SAV)	7.1-8.1 × 3.9-4.5 (av 7.6 × 4.2)	1.7-1.9 (av 1.8)	oblong, ovoid or ellipsoid
Nat. res. Travertínová kopa, Sobotisko (SAV)	7.3-8.4 × 4.0-4.5 (av 7.9 × 4.2)	1.7-2.0 (av 1.9)	mostly oblong

4

5 ^a Please note that all terms in the top-line and the left column must begin with a capital letter.

6 Do not use vertical lines in the table.

7 ^b All entries should be left-aligned. For mere numerical data align the columns of numbers by
 8 their decimal points using word processor decimal tabs. Also, place a zero before the
 9 decimal point of numbers less than 1 (e.g. 0.1).

10 ^c For supplemental notes, use letters or asterisks (a, b, c or *, **, ***).

11

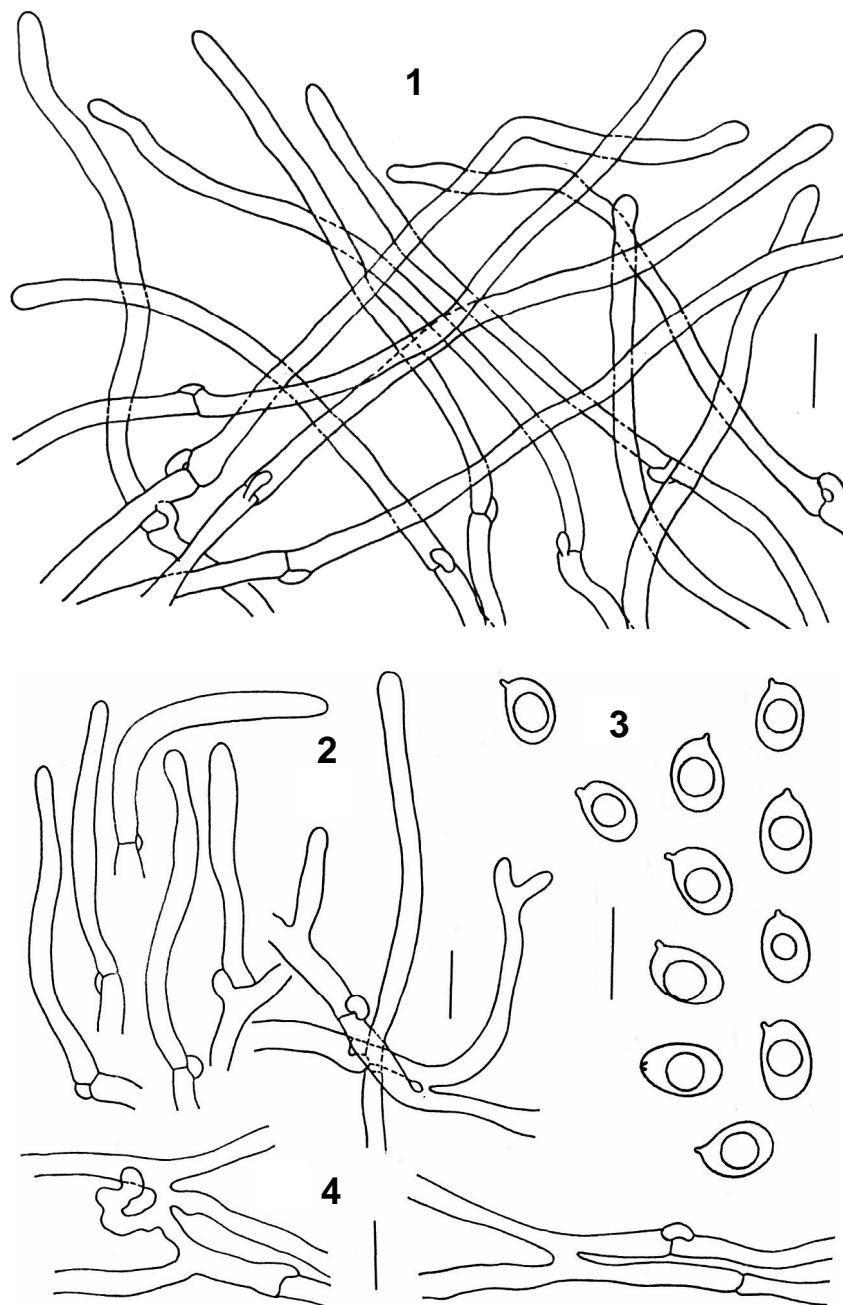

1 **Tab. 2.** – Fine root biomass and number of mycorrhizal root tips in the upper soil layer (depth
 2 5 cm) of a montane Norway spruce stand after snow melt. DW = dry weight; SD = standard
 3 deviation; N = sample size.

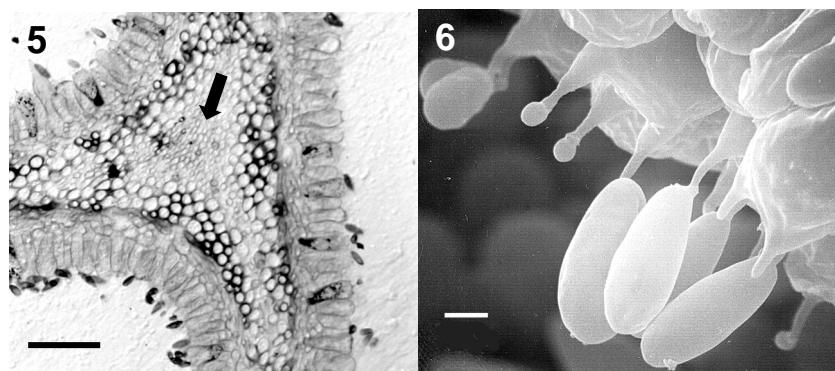

4

Sample site	DW Biomass mean value (g 100 mL ⁻¹)	SD	Number of root tips (mean value 100 mL ⁻¹)	SD	N
